A. Course Description

This laboratory course is designed to provide students with fundamental concepts of electronic circuits for lab experience. Emphasis is placed on analysis, selection, biasing, and applications. Upon completion, students should be able to construct, analyze, verify, and troubleshoot analog circuits using appropriate techniques and test equipment. Every class will have a short lecture introducing the procedures, concepts, formulas and instructions relevant to the experiment. The lecture will also cover what is expected in the lab-report; don't be late. Attendance and participation is mandatory. Experiments will usually be performed in groups, but each student will turn in an individual lab report.

B. Course Outcomes

At the end of this course the student will be able to:

1. Observe and analyze physical data relevant to some of the experiments in electronics.
2. Provide students with a thorough understanding of the basic concepts of physics and the methods scientists use to explore natural phenomena, including observation, hypothesis development, measurement and data collection, experimentation, evaluation of evidence, and employment of mathematical analysis.
3. Develop the student's mathematical ability to manipulate formulae and derive correct numerical solutions that can be measured in the real world.
4. Instruct students in the competent use of laboratory equipment to collect and record data, apply relevant mathematical models and perform required computations, and present the derived results as an application of a measured observation of the physical world.

C. References

Required Textbook

- Laboratory Manual supplied by the Department of Physics.
- Laboratory Manual is available at the website of the Department of Physics.

Course Website: <http://www.imamm.org/>

D. Topics Outline

1. **Introduction** (Contact hours: 4).
2. **Experiment 1: Recording the current-Voltage characteristic of a diode** (Contact hours: 4).
3. **Experiment 2: Half-wave rectifier circuit** (Contact hours: 4).
4. **Experiment 3: Full-wave rectifier circuit** (Contact hours: 4).
5. **Experiment 4: Capacitor filter circuit** (Contact hours: 4).
6. **Experiment 5: Zener-diode characteristics** (Contact hours: 4).
7. **Experiment 6: Voltage stabilization with Zener diode** (Contact hours: 4).
8. **Experiment 7: Bipolar transistor characteristics** (Contact hours: 4).
9. **Experiment 8: Field Effect Transistor (FET)** (Contact hours: 4).
10. **Revision** (Contact hours: 4).

E. Office Hours

Office hours give students the opportunity to ask in-depth questions and to explore points of confusion or interest that cannot be fully addressed in class.

F. Exams & Grading System

The semi-official dates of the exams for this course are:

- **Midterm 1:** 6th or 7th week.
- **Midterm 2:** 11th or 12th week.
- **Quizzes, Lab. reports & Homeworks:** During the semester.
- **Final Exam:** 16th week.

Your course grade will be based on your semester work as follows:

Midterm 1: 7.5 %	Midterm 2: 7.5 %	Final Exam: 50 %
Quizzes, Lab. reports, Homework, Attendance & Participation: 35 %		

The grading distribution:

A+	A	B+	B	C+	C	D+	D	F
[95, 100]	[90, 95)	[85, 90)	[80, 85)	[75, 80)	[70, 75)	[65, 70)	[60, 65)	[0, 60)

G. Student Attendance/Absence

Only three situations will be considered as possible excused absences:

- Occurrence of a birth or death in the immediate family will be excused. (“Immediate family” is defined by the University as spouse, grandparents, parents, brother, or sister).
- Severe illness in which a student is under the care of a doctor and physically unable to attend class will be excused. Students are not excused for a doctor's appointment. Do not make appointments that conflict with rehearsals. Notes from the University Health Center will be accepted.
